## Introduction

Hey there, I am 22 years old, born and raised in Karachi. I have been developing end-to-end smart solutions for more than four years. My knowledge and experience are the results of my hard work. My goal is to polish my skills to absolute perfection. I can confidently say I have absolute mastery in Flutter, React JS, and React Native. I enjoy technology a lot and like to showcase my skills to the world. I have published several open-source projects on my Github profile. Links for the projects are right after the skills section.

Aside from my development interests, I am also a computer enthusiast and gamer. I have a custom-built i7 4th generation system, Which I have configured to dual boot Hackintosh and Windows. Hackintosh is a very complex setup to enables non-apple hardware to run macOS, Which I only use for development work And my Windows OS is only for gaming I like to play CS: GO and Age of Empires: DE every once in a while. I have also finished Detroit: Become human, CyberPunk 2077, GTA 4, and GTA 5.

## Skills stack

HTML5

CSS3

PUG(Jade)

SASS

Bootstrap

Javascript

Typescript

JQuery

React JS

Material UI

React SSR

Firebase

Socket.IO

Webpack

React Native

Flutter

Flutter Desktop/Tablet Apps

# How I work

- Writes clean, flexible, scalable and readable code.
- Writes code generator templates for boilerplate code.
- Use latest SDKs and APIs for long term support.
- Writes scripts to automated project setup and release builds.
- Integrates proper lints and code formatters to enforce a general standard & code consistency.
- Writes end to end and unit tests to ensure high quality safe and stable code.
- Use git version management with proper detailed documentation of updates.
- Use best coding practices which enhances development experience for other developers.
- Integrate pipelines for automated deployment.

# Experience

Sastaticket.pk

Software engineer  
Jan 2021 - Present

Leading flutter mobile (iOS, Android) development project of sastaticket.pk.

Fiverr Freelance

Full Stack, Flutter and React Native  
Sep 2018 - Present

I mostly took small gigs like build MVPs mobile apps using React Native & Flutter for different clients. I also made small scale custom CMS to manage data with nodeJS & React JS Also did Fixed bugs, Tunned performance, Updated apps to new flutter version by solving native dependency conflicts & Made very unstable apps to stable stage.

Upwork Freelance

Full Stack, Flutter and React Native  
May 2018 - Present

In Upwork, I primarily worked on worked on React JS & React Native small projects with long term clients.

Fetch Sky

Associate Software Engineer  
Nov 2017 - Jan 2018

Junior Software Engineer  
Dec 2016 - Oct 2017

Peekaboo Guru is the product of Fetch Sky which is a location based platform. that acts as your complete lifestyle guide and shows all the deals and discounts offered in the market. I contributed technically on consumer mobile app and website, enterprise mobile sdk, internal admin panel and backend server.

In consumer web and mobile app development I got to work with React Native, React JS, styled-components, Redux, Webpack and Redux Saga. I built reusable components while making sure it scale well on multiple screen sizes. I also learned a great deal of react eco system like best practices, proper use of lints, configuring webpack and firebase.

In admin panel I got to work on AngularJS(1.5). I built complex data tables to show, create, update and delete data. Also integrated a custom built light weight image cropping and resizing module.

In backend I got to work on AWS (S3, SES), puppeteer, NodeJS and MariaDB. I wrote CRUD API calls for modules and & built a light weight image cropping module via "node-canvas".
